

## 300V Series LED Tube

### LINEAR FLUORESCENT RETROFIT LAMP

For: T8 and T12 lamp replacement

The Energy Focus 300V Series LED Tube utilizes a direct-wire installation mode. Direct-wire TLEDs require that any existing ballast be removed and the TLED be rewired to operate on AC line voltage. Simple re-wiring and replacement of non-shunted lamp holders are also required. By removing the ballast your TLED no longer depends on any additional hardware to function normally and also minimizes points of failure - less maintenance required. In addition, the 300V Series provides 130 lm/W efficacy.

### FEATURES AND BENEFITS

- Flicker-free LED lighting
- Non-shunted lamp holder required
- Integrated driver, Type-B (Direct-Wire)
- Replacement of existing tombstones recommended when retrofitting
- Single-ended power; INPUT end is electrically connected, other end has no internal connections.

Must use non-shunted lamp holders
